SOFTWARE PROJECTS

Dating Web App

- Currently designing a dating web app since June 2023 using React.js and CSS for the front end, Flask and Express.js for the backend, and MySQL for the database, with future plans to migrate to PostgreSQL.
- Will be designed to allow people to connect with potential matches based on their interests and other attributes, such as what city and state they live, how old they are, etc.
- Will consider designing for connecting university students with other fellow classmates so that they can have an easier, real-world relationship experience after they leave school.

Personal Website

- Designed and implemented a website using React.js as the main framework while also using CSS and React Bootstrap to stylize the components.
- Used to display works, such as software projects and personal photography, such as the sky, the trees, and other pieces of nature surrounding us.

CV Website

- Designed and implemented a single-page application to display information such as education, work experience, and software projects using HTML and CSS.
- Relevant coursework was also included to give potential recruiters an idea of the skills I covered and learned during college.
